

# GTAG10 Air-Guard Retro Fit

SKU:

## Product Description

### GTAG10 Retro Fit Air-Guard

The GTAG10 grommet is a 2 piece unit designed to be installed over an existing cabled or piped openings up to 127mm in diameter. The unit is made from V0 flame retardant ABS resin and each half features a curved brush and lower gasket layer. When installed the centripetal bristle design and gasket combine to form a tight air seal. To

facilitate installation in addition to fixing screws the back of the ABS outer rim is fitted with a heavy duty peel and stick adhesive foam. The GTAG10 is easy to install and seals unsightly openings forming a seal around cables eliminating air loss or drafts.

- Seals cable openings quickly and effectively
- Reduces / eliminates by-pass air in data centres
- Aesthetically improves the cabled area
- No special fixing tools required
- Seals an opening up to 127mm in diameter

Sealing cable openings in data centres is proven to improve the cooling efficiency of the installation. The Air-Guard range of cable grommets has been developed with the assistance of leading data centre engineers to provide a comprehensive range of sealing solutions for both new and legacy installations. The Air-Guard range of cable grommets is not found wanting in terms of sealing performance and uniquely is specifically made from flame retardant materials. This makes Air-Guard not only **the cool choice** but also the safer choice when specifying sealing grommets for your project.
