

AIR-GUARD® EXTREME

GTAG2

GTAG2 Integral Raised Floor Grommet

The GTAG2 Air-Guard® EXTREME cable grommet has a unique brush and gasket design which combine to form an excellent air seal around cables. The unit is fitted, as standard, with a strong safety cover which can be left in the housing until the grommet is ready for cabling. The GTAG2 Air-Guard® is designed to address the problems caused by bypass air flow. Correct sealing cable openings will increase cooling efficiencies and dramatically reduce energy cooling costs.

Sealing around cable openings offers the following benefits:

- Reduces bypass airflow and increases under-floor static pressure.
- Increases cooling efficiencies
- Reduces running and infrastructural costs
- Helps promote Hot Aisle / Cold Aisle best practice
- Improves air cooling performance of grilles and/or perforated panels
- Reduces carbon footprint
- Reduces hot spots

The GTAG2 Air-Guard® features:

- Double Layered Engineered Sealing System- Brush upper & EPDM lower gasket
- Unique Air-Guard overlapping Nylon 6 Brush System for an even better seal
- Integrated Safety Cover
- Frame and Lid Manufactured from High Strength Flame Retardant ABS
- Easy to install and integrates with the access floors static dissipative system
- Fits a floor panel opening 230mm x 165mm (9" x 6 1/2")
- Overall dimension 275mm x 210mm 40mm (10 1/8" x 8 3/8" x 1 5/8")
- Maximum cable aperture 180mm x 120mm (7" x 4 3/4")
- RoHS compliant.

GTAG2 Air-Guard®

Sealing cable openings in a raised floor is the best first step in creating efficient under floor cooling in a data centre.

Independently tested, the **GTAG2** has the best air seal performance of any large brush grommet. Unlike other manufacturers, Air-Guard and Air-Block grommets are made from flame retardant V0 rated materials.

The **GTAG2** double seal system – overlapping brushes and neoprene gasket work together to provide the best “no nonsense” air sealing cable grommet. The gasket is an air tight membrane which centres cables within the grommet preventing edge brush crush, the overlapping brush then seals around cables. The unit also comes supplied with all fitting hardware and more importantly a safety cover. This means the unit can be installed well in advance of computer racks without compromising safety. The **GTAG2** is easy to cable and the neoprene gasket stretches to accommodate large cable bundles. All of this adds up to making the **GTAG2** the best value large brush grommet on the market.

The **GTAG2** is now the brush grommet of preference for many leading Data Centres and it's easy to see why.....

- Double air seal – Brush and twin layer gasket
- Flame retardant frame – V0 fire rated brush and gasket
- Free Hi-Vis SAFETY LID – Ideal during Data Centre fit-out
- Features “Better Seal” overlapping brush system plus alignment gasket
- Cut-out template and fitting hardware supplied
- Overall dimension – 275mm x 210mm x 38mm

If quality, performance and safety are important to you, select.....

Air-Guard® “the cool choice”

Size: Cut Out Dimension 230mm x 165m **Color:** Black

Weight: 1kg
